Reference: Moore, Thomas A., *A General Relativity Workbook*, University Science Books (2013) - Chapter 7; Problem 7.6.

We've used the following relation between the derivatives of the electromagnetic field tensor F^{ij} to get several of Maxwell's equations.

$$(0.1) \quad \partial_i F_{jk} + \partial_k F_{ij} + \partial_j F_{ki} = 0$$

Here we verify that this relation is true when F^{ij} is written in terms of the four-potential, that is

$$(0.2) \quad F^{ij} = \partial^i A^j - \partial^j A^i$$

We can lower both indices in this equation and plug it into the first equation:

$$(0.3) \quad \partial_i F_{jk} + \partial_k F_{ij} + \partial_j F_{ki} = \partial_i (\partial_j A_k - \partial_k A_j) + \partial_k (\partial_i A_j - \partial_j A_i) + \partial_j (\partial_k A_i - \partial_i A_k)$$

$$(0.4) \quad = \partial_i \partial_j A_k - \partial_j \partial_i A_k + \partial_k \partial_i A_j - \partial_i \partial_k A_j + \partial_j \partial_k A_i - \partial_k \partial_j A_i$$

$$(0.5) \quad = 0$$

The terms in the second line cancel in pairs since the order of the partials doesn't matter.
